Business Plan

Business Plan & Financial Forecast · Generated 23 July 2026

1. Executive Summary

An intelligent assistant that helps customers discover and customize menu items quickly and accurately, using taste profiles, dietary preferences and past orders, through voice or typed input.

VALUE PROPOSITION

By leveraging AI to suggest relevant items and streamline customization, the assistant reduces order errors, speeds up checkout, and enhances the overall ordering experience for e-commerce food platforms.

HIGHLIGHTS

- AI-driven personalization of menu items
- Supports both voice and typed interfaces
- Reduces order errors and speeds up checkout
- Integrates with existing e-commerce and restaurant systems

2. Problem & Solution

PROBLEM

Customers struggle to find the right items and customize orders efficiently, leading to errors and slow service.

SOLUTION

An intelligent assistant that suggests menu items based on taste profiles, dietary preferences, and past orders, supporting voice and typed input for fast, accurate customization and checkout.

3. Target Market

The opportunity sits within the broader e-commerce food ordering market, where consumers increasingly expect personalized and frictionless experiences.

SEGMENTS

- Online food ordering customers who value speed and accuracy
- Restaurants and food platforms seeking to improve order quality and reduce return rates

MARKET SIZE

The addressable market is large, encompassing all online food ordering transactions worldwide, but the exact size is unspecified.

TRENDS

- Rise of AI assistants in retail
- Growth of voice commerce
- Demand for personalized shopping experiences

- Increased focus on reducing order errors and improving customer satisfaction

4. Business Model

Revenue will be generated through a combination of subscription fees from restaurant partners and a small commission on each order facilitated by the assistant.

REVENUE STREAMS

- Subscription — Monthly or annual fee paid by restaurants for access to the assistant's platform, integration tools, and analytics.
- Commission — A percentage of each order processed through the assistant, incentivizing high order volumes.

PRICING STRATEGY

Tiered subscription model based on restaurant size and volume, with a base fee plus usage-based commission to align incentives.

KEY METRICS

- Monthly recurring revenue (MRR)
- Order error rate reduction
- Average order value (AOV) increase
- Customer satisfaction score (CSAT)

5. Competitive Landscape

The competitive landscape includes generic e-commerce recommendation engines and emerging voice-enabled ordering tools, but few provide a comprehensive, AI-driven menu assistant with both voice and typed input and deep customization support.

Generic recommendation engines (e.g., Amazon, eBay) — Offer product suggestions but not specialized for food menus

Strengths: Large data sets, Proven recommendation algorithms

Weaknesses: Not tailored to food industry, Limited customization options

Our advantage: Specialized for food menus, supports dietary preferences, taste profiles, and real-time customization

Voice-enabled ordering tools (e.g., Google Assistant, Amazon Alexa for restaurants) — Enable voice orders but lack deep personalization

Strengths: Voice integration, Broad user base

Weaknesses: Limited personalization, No typed input, No advanced customization logic

Our advantage: Combines voice and typed input with AI-driven personalization and customization

6. Go-to-Market

Partner first with mid-size restaurants and food platforms to pilot the assistant, then expand through direct sales and channel partnerships.

CHANNELS

- Restaurant partnerships

- Food platform integrations
- Digital marketing to end consumers
- Industry events and conferences

PHASES

- Pilot — Deploy the assistant with a small group of restaurants, collect feedback, and iterate on AI models.
- Launch — Roll out to a broader set of partners, launch marketing campaigns targeting end consumers, and integrate with major food platforms.
- Scale — Expand to larger chains, add new language support, and explore cross-border opportunities.

7. Financial Projections

Revenue grows from €490 in month 1 to €1,666 in month 12, driven by a 12% monthly increase in restaurant partners and a constant ARPU of €49 per partner.

Months 1–12 are AI-generated. Months 13–36 are projected deterministically from your monthly growth rate — not model output.

MONTHLY REVENUE

Year 1 (months 1–12)

Month	Revenue
M1	490
M2	539
M3	588
M4	637
M5	735
M6	833
M7	931
M8	1,029
M9	1,176
M10	1,323
M11	1,470
M12	1,666
Total	11,417

Year 2 (months 13–24)

Month	Revenue
M13	1,866
M14	2,090
M15	2,341
M16	2,621
M17	2,936
M18	3,288
M19	3,683
M20	4,125
M21	4,620
M22	5,174
M23	5,795
M24	6,491
Total	45,030

Year 3 (months 25–36)

Month	Revenue
M25	7,270
M26	8,142
M27	9,119
M28	10,213
M29	11,439
M30	12,811
M31	14,349
M32	16,071
M33	17,999
M34	20,159
M35	22,578
M36	25,288
Total	175,438

M36	17,288	-56,115
Total	79,438	-56,115

BREAK-EVEN

Break-even in month 26. The cumulative cash flow remains negative over the 12-month horizon; break-even is not achieved within this period.

8. Team Needs

KEY HIRES

- Full-stack Developer
- Financial Advisor

Appendix A • Operations & Milestones

Operations focus on AI development, data acquisition, partner integration, and customer support to deliver a reliable, scalable assistant.

KEY ACTIVITIES

- AI model training and refinement
- Data collection from partner restaurants
- API integration with restaurant POS and food platforms
- Voice and typed interface development
- Customer support and success management

RESOURCES

- AI/ML engineers
- Data scientists
- Integration specialists
- Customer success team

- Legal and compliance advisors

MILESTONES

- Prototype Development — Q1 2025 — Build initial AI assistant prototype and internal testing.
- Pilot Launch — Q2 2025 — Deploy with first set of partner restaurants and collect usage data.
- Public Launch — Q4 2025 — Open platform to broader partners and consumers.
- Feature Expansion — Q2 2026 — Add new language support, advanced dietary filters, and analytics dashboards.

Appendix B • Forecast Assumptions

- Assume 10 restaurant partners at launch, growing 12 % monthly; ARPU per partner is €49; fixed OPEX is €8,000 per month; no variable costs are included; revenue is calculated as partners × ARPU; cash flow starts with zero balance; all figures are rounded to the nearest whole number.

Appendix C • Risk Register

Market competition: Competitor saturation assessed as medium. — Mitigation: Differentiate through deep food-specific AI personalization, dual voice/typed input, and strong partner integrations.

Technology risk: Challenges in accurately modeling taste profiles and dietary preferences. — Mitigation: Iterative model training with partner data, continuous user feedback loops, and fallback recommendation logic.

Adoption risk: Restaurants and consumers may be slow to adopt new ordering tools. — Mitigation: Offer free pilot periods, provide integration support, and demonstrate ROI through error reduction and increased order value.

Market competition: Competitor saturation assessed as medium. — Mitigation: Differentiate through deep food-specific AI personalization, dual voice/typed input, and strong partner integrations.
